These specification sheets are the proprietary product of **AUO Optronics Inc. ("AUO")** and include materials protected under copyright of **AUO**. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of **AUO**.

The device listed in these technical literature sheets was designed and manufactured for use in OA equipment.

In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

AUO assumes no responsibility for any damage resulting from the use of the device, which does not comply with the instructions, and the precautions specified in these technical literature sheets.

Contact and consult with an **AUO** sales representative for any questions about this device.

1. Application

This specification applies to a color TFT-LCD module, QD32HL05

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel; driver ICs, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a 1366x3x768 dots panel with 16.7 million colors by using the LVDS (Low Voltage Differential Signaling) interface, 8-bit driving method and supplying +5V DC supply voltage for TFT-LCD panel driving.

The TFT-LCD panel used for this module has fast response time. A low-reflection and higher-color-saturation type color filter is also used for this panel. Therefore, high-brightness and high-contrast image, which is suitable for multimedia use, can be obtained by using this module.

[Features]

- 1) High aperture panel; high brightness
- 2) Brilliant and high contrast image
- 3) High speed response
- 4) WXGA resolution, 16:9
- 5) LVDS interface
- 6) QSV technology
- 7) Wide viewing angle

V_{cc}-dip conditions

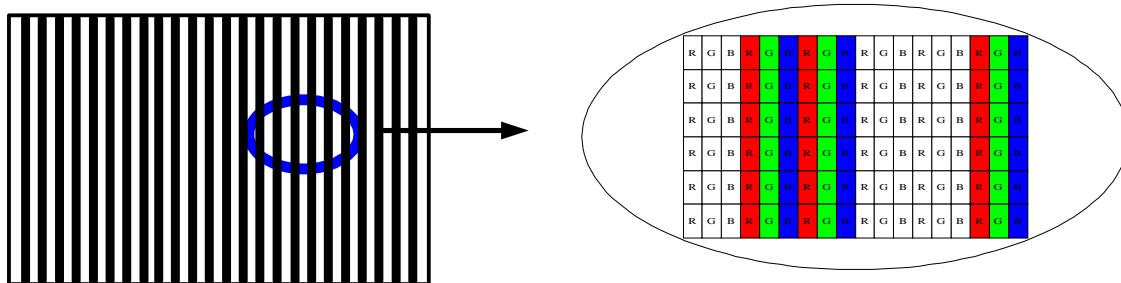

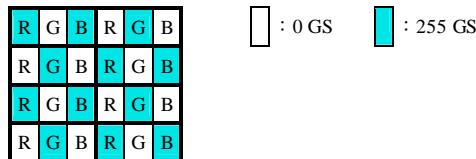

1) $4V \leq V_{cc} < 4.5V$
 $t_d \leq 10\text{ ms}$

2) $V_{cc} < 4\text{ V}$

V_{cc}-dip conditions should also follow the On-off conditions for supply voltage

【Note3】

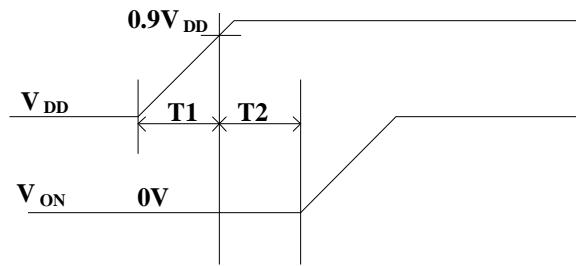

Typical current condition: 2-line vertical stripe pattern (0,255GS). $V_{CC}=+5V$ Max current condition: 1x1dot Checker Board Pattern (0, 255GS). $V_{CC}=+5V$ 

6-2. Backlight driving

The backlight system is a direct-lighting type with 16 CCFT (Cold Cathode Fluorescent Tube).

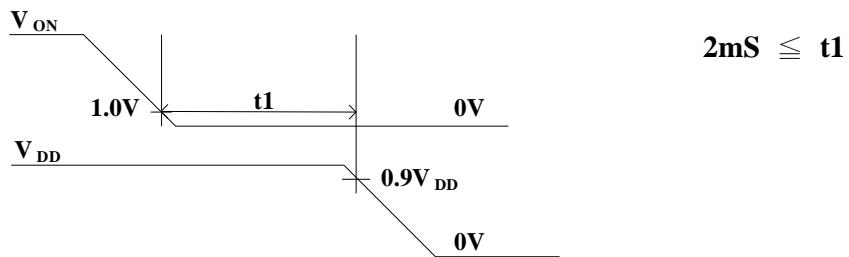

The characteristics of the lamp are shown in the following table.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Power Supply Input Voltage	V_{DD}	21.6	24.0	26.4	V	【Note1】

Lamp life time	LL	50000	60000		Hours	$I_L \leq 6.0 \text{mA}$ 【Note6】

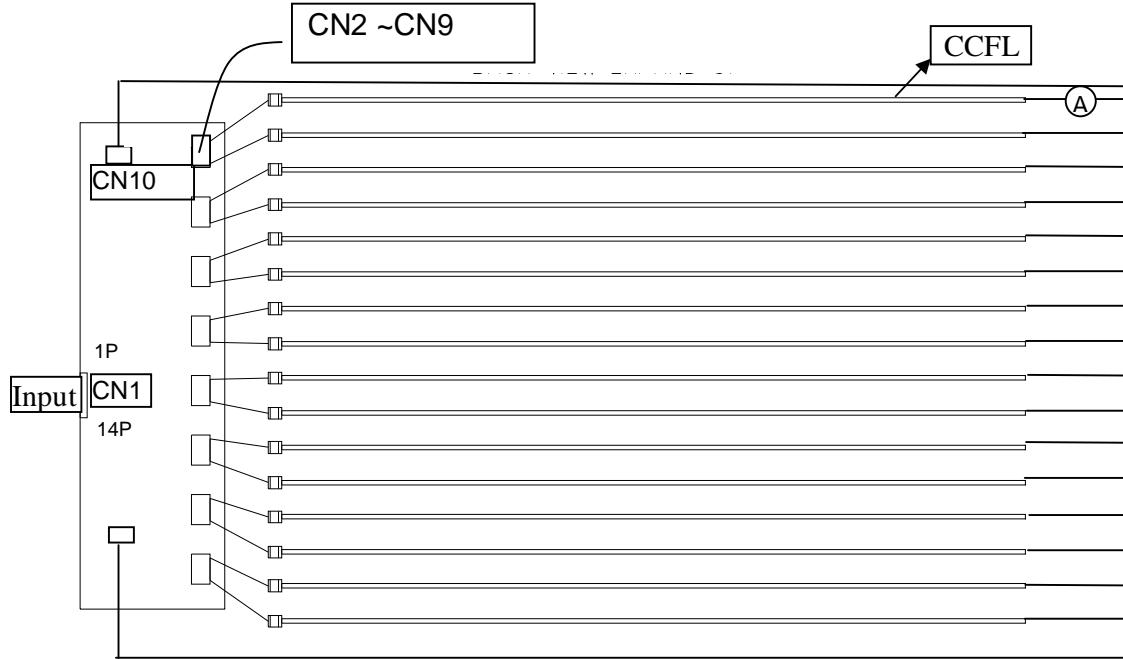

【Note1】**1. Power ON sequence:**

$$4\text{mS} < T1 \leq 20\text{mS}$$

$$2\text{mS} \leq T2$$

2. Power OFF sequence:

【Note2】 Lamp current is measured with current meter at low voltage end as shown below.

【Note3】 Calculated Value for reference ($I_{DD} \times V_{DD}$)

【Note4】 Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.

【Note5】 The voltage above this value should be applied to the lamp for more than 1 second to start-up. Otherwise the lamp may not be turned on.

【Note6】 Lamp life time is defined as the time when either ① or ② occurs in the continuous operation under the condition of $T_a = 25^\circ\text{C}$ and $I_L \leq 6.0\text{mA rms}$.

① Brightness becomes 50 % of the original value under standard condition.

② Kick-off voltage at $T_a = 0^\circ\text{C}$ exceeds maximum value.

Notes:

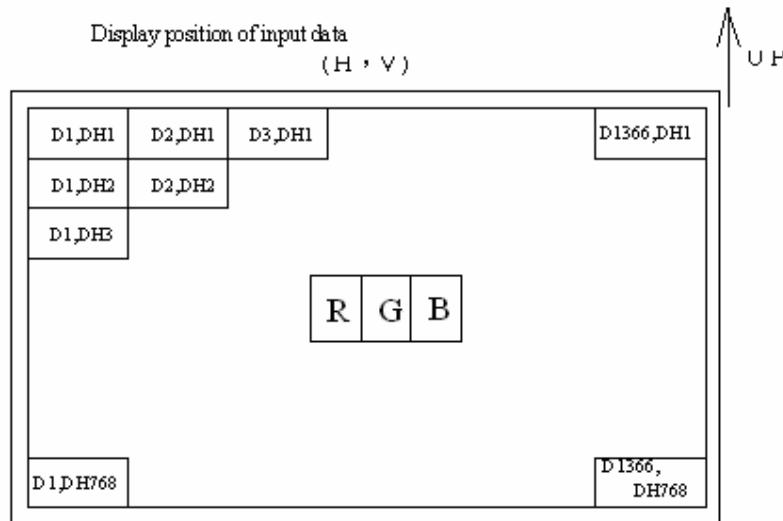

1. The performance of electro-optical characteristics may be influenced by variance of the vertical refresh rates.

2. This module is driven by the data enable signal.

The data enable signal should follow Vsync and Hsync of above table.

※ The measurement shall be executed 30 minutes after lighting at rating.(Typical I_L =6.0 m Arms)

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.3 below.

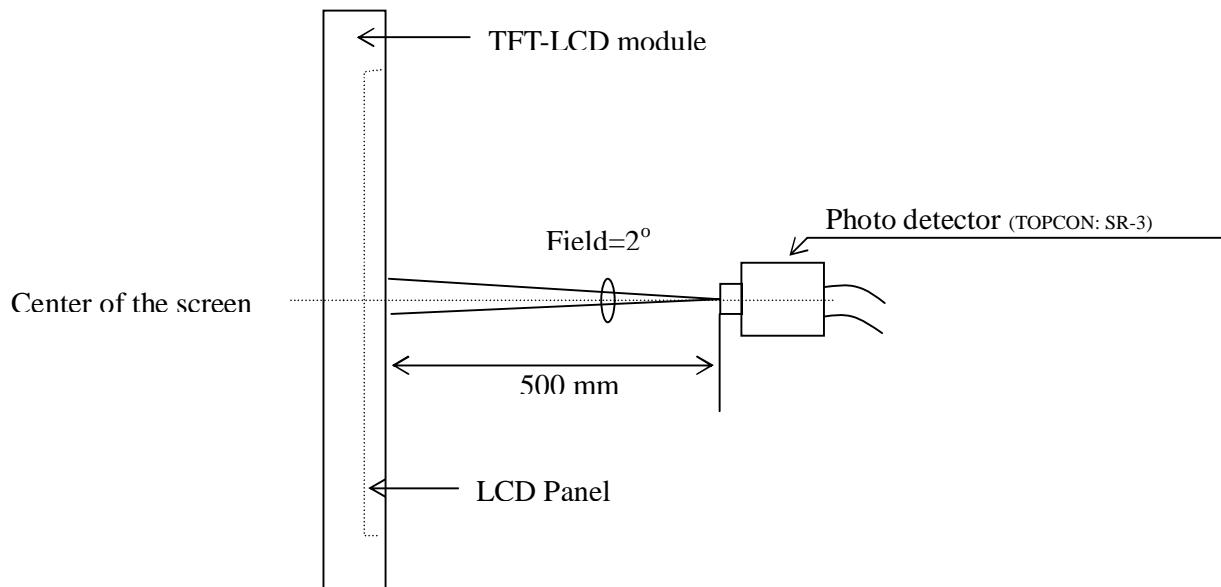

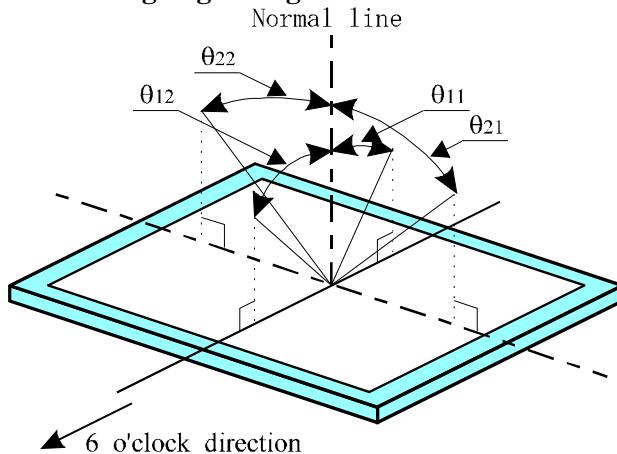

Fig 1. Optical characteristics measurement method

【Note1】 Definitions of viewing angle range:

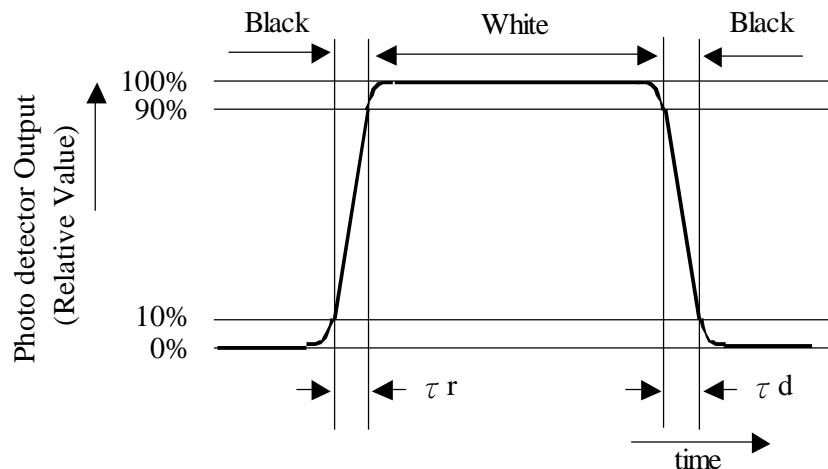

【Note2】 Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【Note3】 Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

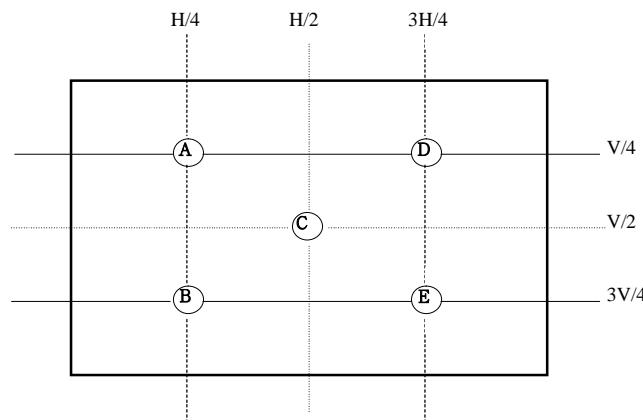

【Note4】 This shall be measured at center of the screen.

Share of module quantity of luminance over $460\text{cd}/\text{m}^2$; $\geq 90\%$

【Note5】 Definition of white uniformity:

White uniformity is defined as the following the number of measurement points within active area, formula are $\delta_w(5)(A \sim E)$. HxV : active area

Maximum Luminance (of 5 points measurement)

$$\delta_w = \frac{\text{Maximum Luminance (of 5 points measurement)}}{\text{Minnum Luminance (of 5 points measurement)}}$$

10. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

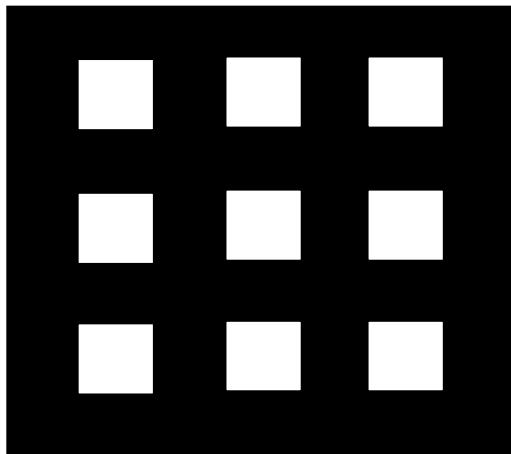

11 · Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.
- h) Observe all other precautionary requirements in handling components.
- i) This module has its circuitry PCBs on the rear side and should be handled carefully in order not to be stressed.
- j) Laminated film is attached to the module surface to prevent it from being scratched. Peel the film off slowly just before the use with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off the 'dust' on the polarizer by using an ionized nitrogen gun, etc...

By air transportation, there are 2-layer of cartons stacking on one pallet;

By ocean transportation, there are 3-layer of cartons stacking on one pallet.

For both air- and ocean- transportation, each layer has 6 cartons.

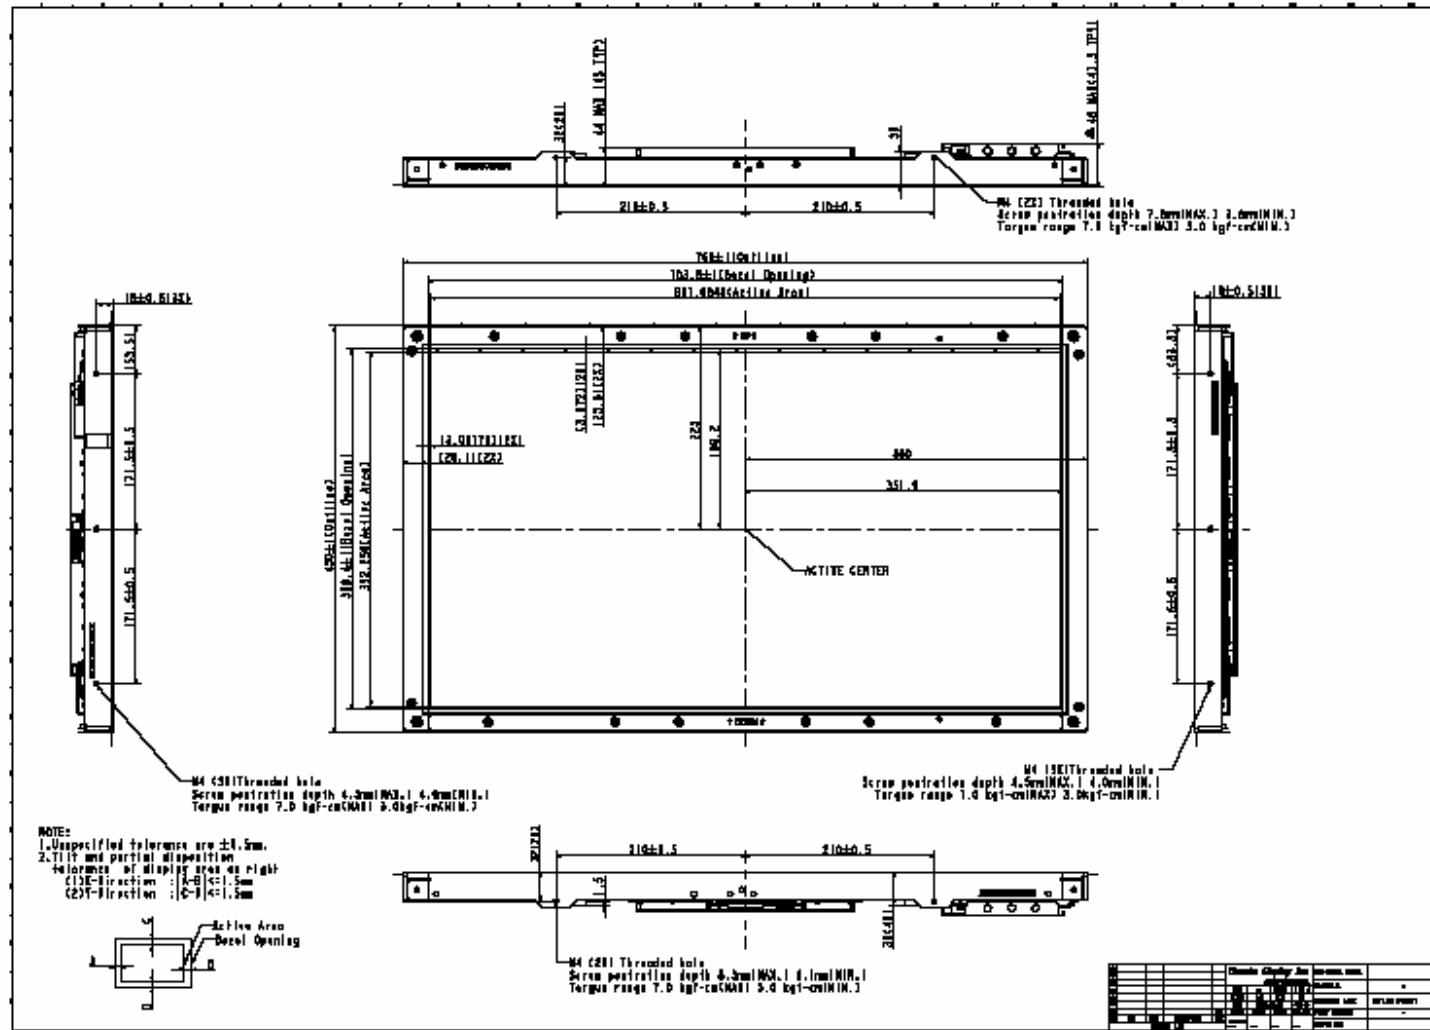

4) Maximum layer of carton 3-layer.

Notes:

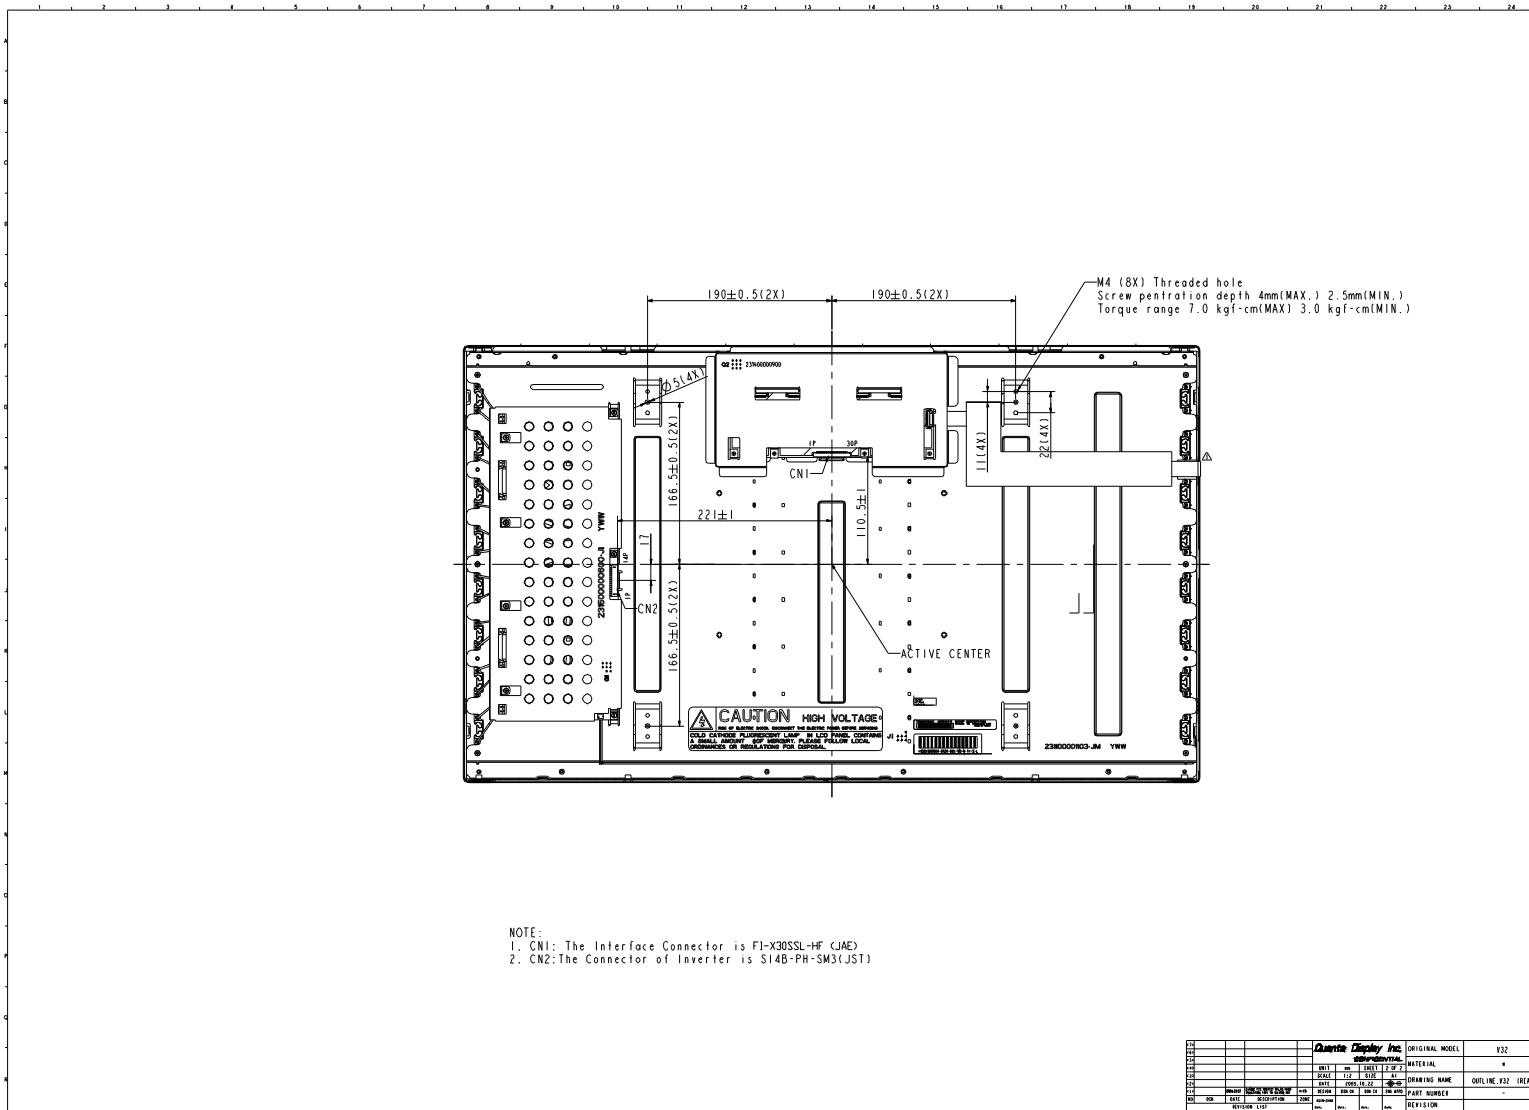

- 1) Adjusting volume has been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- 2) Disassembling the module can cause permanent damage and should be strictly avoided.
- 3) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 4) If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.

2	Low temperature storage test	Ta = -25°C, 500h	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS
3	High temperature & High humidity operation test	Ta = 40°C, 95 %RH, 500h	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS
4	High temperature operation test	Ta = 50°C, 500h	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS
5	Low temperature operation test	Ta = 0°C, 500h	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS
6	Vibration test (non-operating)	Frequency: 10~500Hz, 1.0G, 1Hr/each axis	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS Active area must be inside of the bezel opening.
7	Shock test (Non- operating)	Gravity: 100G Pulse width: 2ms, half sine wave Direction : ±X,±Y,±Z Once for each direction.	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS Active area must be inside of the bezel opening.
8	ESD	Contact-op: ±8kv, Contact-nop: ±10kv, Air-op: ±15kv, Air-nop: ±20kv, (Contact area is limited on metal bezel) C: 150PF, R: 330Ω	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS

9	Thermal cycle	$T_a = -20, 1h \sim 60^{\circ}C, 1h, 100$ cycles	There is no fatal defect for the performance of the LCD module inspected by the inspection method specified in Doc.NO. QD32HL05-01-IIS
10	High temperature operation test 2	$T_a = 60^{\circ}C, 200h$ [Note1] To check linear simi that occur boundary between white and black pattern.	Cannot see any simi through the 10% ND filter at any gray scale at 60 degC. Tentative criteria until the end of Feb: Cannot see any simi through the 5% ND filter at 60 degC and through the 10% ND filter at 25 degC at any gray scale.
